

# New Survey: Online Student Demand for Mental Health Support Dramatically Increases

Overwhelming majority of faculty and staff have seen increased demand for mental health support; more than a quarter report frequent or very frequent outreach from learners

**NATICK, MA. (MAY XX, 2024)** -- An overwhelming majority (82.58%) of faculty, staff and administrators working with online students have seen an increase in demand for mental health support over the past academic year, according to a national survey of higher education professionals released by teletherapy provider Uwill and the Online Learning Consortium, a global community of more than 4,000 higher education professionals dedicated to advancing quality digital learning. The data further underscore the importance of expanding support in online settings in an era where more than half of all U.S. college students are enrolled in online courses.

“More students are taking online courses than at any time in our history. At the same time, a deepening crisis of student mental health and an epidemic of digital isolation and loneliness are creating challenges that affect online learners in unique and profound ways,” said Michael London, co-founder and CEO of Uwill. “This data adds to our understanding of how mental health challenges manifest in the online environment—and the role that online faculty and staff play as first responders. We hope the findings shed new light on the issue as online programs work to center mental health and well-being in the online experience.”

The survey of 338 instructors, staff and administrators at colleges and universities gauged the perspectives of higher education professionals on a range of issues related to student mental health and well-being for students enrolled in online programs. In the 2022-23 academic year, approximately 53% of all students were enrolled in at least one online course.

According to the survey, more than 70% of respondents (70.39%) said that online students occasionally, frequently, or very frequently reach out regarding mental health concerns. More than one-third (34.83%) of respondents believe students are not satisfied with the mental health services offered by their institution.

“To make good on the full promise of online education, we must recognize and address the profound intersection between mental health and student success,” said Jennifer Mathes, Ph.D., chief executive officer of OLC. “Even with the rising incidence of serious mental health challenges, online faculty and staff clearly can play a critical role in building thriving online student communities that prioritize and support mental health and well-being.”

## Other findings from the survey include:

- **Faculty and Staff as Online Mental Health First Responders.** Despite a significant number who report contact with students about mental health issues, a troubling percentage of faculty and staff do not feel adequately prepared to serve as mental health first responders. More than a third (37.44%) felt inadequately or very inadequately trained to recognize and respond to mental health issues with online students.
- **Need for Additional Training and Professional Development.** Reflecting their increased role in responding to student mental health issues, an overwhelming majority (83.25%) expressed a high level of interest in receiving additional training on how to support the mental well-being of online students.
- **Awareness, Availability and Access as Barriers.** Nearly two-thirds (62.1%) of respondents said that time constraints have a significant to very significant effect on hindering access to mental health services for online students. The most common issues observed by faculty and staff included limited awareness of available services (58.64%), a lack of services tailored to online student needs (54.79%), financial constraint/insurance coverage (46.29%), lack of services in general (45.66%), and limited appointment availability (44.75%).
- **Disparity Between On-Site and Online Support Services.** Respondents were more than twice as likely to report access to onsite counseling (66.67%) while only 39.19% mentioned teletherapy from a third-party and only 15.77% mentioned online mental health screenings.
- **Students Not Satisfied with Mental Health and Wellness Support.** Only 15.73% of faculty, staff, and administrators say that mental health support meets online student needs.

The survey was conducted using a self-administered online questionnaire sent to faculty, staff, and administrators working with online programs. Respondents included both full- and part-time faculty and staff: 45% of survey respondents were faculty, 21% were support staff, 10% were advisors or counselors, 20% were directors or assistant directors and 2% were vice presidents or executive directors. The majority of respondents (63.28%) work for public institutions, while 24.18% work for private non-profit institutions, and 12.84% work for private for-profit institutions. The survey received responses from all 50 U.S. states and Washington, D.C., as well as 36 countries.

**About Uwill:** Uwill is the leading mental health and wellness solution for colleges and students. Utilizing its proprietary technology and counselor team, Uwill pioneered the first student and therapist matching platform. The solution offers an immediate appointment with a licensed counselor based on student preferences, all modalities of teletherapy, a direct crisis connection, wellness events, real-time data, and support. The most cost-effective way to complement a college’s mental health offering, Uwill partners with more than 200 institutions, including the University of Michigan, the University of Alabama - Online, Morgan State University, Seton Hall University, American Public University System, and Lac Courte Oreilles Ojibwe College.
